

**AMENDMENT TO THE SPECIFICATION**

Please amend the paragraph beginning on page 4, line 5 as follows:

--The audio clips can be pre-recorded and loaded in to the radio receiver during manufacture. However, the audio clips can be updated dynamically via the digital broadcast itself in order to make an audio clip highly ~~[[recognizable]]~~ recognizable. For example, when the station "Capital Radio" is selected, an audio clip containing the voice of a presenter from that radio station can be played identifying the fact that Capital Radio has been selected making the user experience more ~~[[personalised]]~~ personalized.--
